

Haglof Link guide

Haglof Link 4.0 is a mobile app enabling wireless file transfer and communication with Haglöf Sweden instruments like Digitech BT, MD II/MD II+, DP II/DP II+, Vertex 5, and Vertex Laser Geo 2 via Bluetooth Low Energy. Users can send files from instruments to the app and share them by email or cloud. The “Send to device” feature allows firmware updates or data preloading—such as tree species lists—by browsing local files.

Menus

Functions

Connect to device	Click to Connect to a new device.
Connected to Dev.	Connected to (device name). Click to Connect to a another device.
Back	Return to the previous menu.
<hr/>
